# Crosslink by Grant Fikes
Theme: Logical

Rules: Variation of Slitherlink rules. The single loop may now intersect itself at a point (it still may not coincide anywhere). At any dot at which more than 2 segments meet, the segments must all travel straight through the dot.

Answer Entry: For each marked row, enter the length in cells of each connected group inside the loop from left to right. Shading the loop so that each fence separates a shaded/unshaded cell can help identify what is inside. Separate each row's entry with a comma. For the example, the answer would be "11,12".
