

14/03/26:

Pentominous by Grant Fikes

Theme: Clue Symmetry and Logic

Rules: Divide this grid into 20 regions each containing 5 cells. Regions with the same shape (including rotations/reflections) cannot share an edge. A cell with a letter in it must be part of the pentomino shape normally associated with that letter. An inventory of polyominoes is given below the puzzle; some pieces might not be used.

Answer Entry: Enter the letter of the shape in each cell in the marked rows.

| | | | | | | | | |
|---|---|--|---|---|---|---|--|---|
| | T | | | | | N | | V |
| | | | | | | | | |
| | | | | W | | | | |
| | | | | | | | | |
| | | | | | L | | | N |
| A | V | | | Y | | | | |
| | | | | | | | | |
| B | | | | | W | | | |
| | | | | | | | | |
| | T | | T | | | | | L |

The inventory shows 12 pentomino shapes, each composed of 5 black squares. The letters U, N, W, Z, I, Y, T, F, L, P, V, and X are placed in specific cells within these shapes. The shapes are arranged in a grid-like fashion, with some overlapping.
