# Light and Shadow by Serkan Yürekli

## Theme: Clue Symmetry and Logic

Rules: Divide the grid into gray and white regions, each containing exactly one number and with an area equal to that number. Numbers in white cells are part of white regions; numbers in gray cells are part of gray regions. Same colored regions cannot share an edge.

**ANSWER ENTRY:** Enter the length in cells of each group (white and gray) in the marked rows. Separate the rows with a comma. For the Example, this is "13,121".
