14/09/19: Minesweeper (Pentomino) by Thomas Snyder
Theme: Clue Symmetry and Logic

Rules: Place the twelve pentominoes into the grid, rotations and reflections allowed. Pentominoes cannot cover the numbered cells, and different pentomino shapes cannot be placed in adjacent cells that share an edge or corner. Numbered cells indicate how many of the surrounding cells (including diagonally adjacent cells) contain parts of the pentominoes.

Answer Entry: Enter the length in cells of each of the shaded segments from left to right for the marked rows, starting at the top. Separate each row's entry with a comma.
