

16/12/10:

Fillomino (Kropki) by Prasanna Seshadri

Theme: Almost Antisymmetric

Rules: Standard Fillomino Rules. Also, if there is a white dot between two adjacent cells, then those cells must contain numbers that differ by one. If there is a black dot between two adjacent cells, then one of the numbers must be twice the other. Either a white or black dot can separate 1 and 2. All possible dots are given (i.e., no unmarked borders can have numbers that differ by 1 or have a quotient of 2).
