16/12/22:
# Crosslink by Serkan Yürekli
Theme: Clue Symmetry and Logic (for Veep)

Rules: Variation of Slitherlink rules. The single loop may now intersect itself at a point (it still may not coincide anywhere). At any dot at which more than 2 segments meet, the segments must all travel straight through the dot.

Example clue grid:

	4		0	
A	3		3	3
B	3	4		2
		3		1

Answer Entry: For each marked row, enter the length in cells of each connected group inside the loop from left to right. Shading the loop so that each fence separates a shaded/unshaded cell can help identify what is inside. Separate each row's entry with a comma. For the example, the answer would be "11,12".

Puzzle grid clues (rows A–D marked):

A	3			2	3		1	1	
		0			1	3			2
B	0							2	2
	2		0	3	2	0			
C		1		2			1		3	4
	3	2		2			3		1	
			0	3	3	0			1
	1	3							2
	3			4	3		0		
D		0	2		1	3			1
