17/01/28:
Tapa (Islands) by Murat Can Tonta
Theme: Clue Symmetry & Logic

Rules: Standard Tapa Rules. Also, similar to Nurikabe, each clue cell is part of an island of horizontally and vertically connected white cells. Islands are allowed to touch diagonally. Islands may contain at most one clue cell, and the area of the island must be one of the numbers in the clue (as an example, if a clue is 15, then the island containing that clue must be either 1 cell or 5 cells large).
