17/09/13:
Cross the Streams (LITS) by Bryce Herdt
Theme: Book Code?
(the row clues hide the theme word "LITS", but how?)

Rules: Standard Cross the Streams rules. Also, the shaded region must be able to be split into tetrominoes to form a valid LITS solution (meaning all tetrominoes are connected but no two tetrominoes sharing an edge are the same shape, including rotations and reflections).
