

# 2018/06/16: Formed Cave by Serkan Yürekli Theme: Clue Symmetry and Logic

**Rules:** Standard Cave rules; also, all groups of cells outside the Cave must be formed out of different arrangements of exactly five cells (i.e., different pentominoes). Pentomino shapes may be reflected or rotated, but they cannot repeat or touch each other. Not all pentominoes need to appear. *[The example uses four cell regions (i.e., tetrominoes) within the same rules.]*
