# 13/09/24: <br> Cave by Thomas Snyder Theme: Lines 

## 13/09/25: <br> Skyscraper Blocks by Serkan Yürekli <br> Theme: Clue Symmetry and Logic

Rules: Place digits 1-6 into the grid so that no digit is repeated within a row or column. Digits outside the grid indicate the number of buildings that can be seen from the corresponding direction. The buildings form two-digit numbers and the relations between some numbers are shown with a greater than/less than sign.

## 13/09/26: <br> Sashikabe by Grant Fikes <br> Theme: Logic

Rules: Hybrid of Nurikabe and Sashigane. Standard Nurikabe rules are in place for the "ocean" (connected and no $2 \times 2$ squares) but the island rules have changed as follows: All islands must be L-shaped and one cell wide. Islands cannot share an edge. An arrow clue points from an end of an island towards the bend in the middle. A circle clue indicates the bend in the middle of an island; if a number is also present, this is the size of the island in cells. An island can have 0,1 , or more of these clues given.

## 13/09/27: <br> Battleships (Nansuke) by Grant Fikes Theme: Logic

Rules: Place the given fleet into the grid so that no two ships touch, even diagonally. In the remaining unused cells, place the given numbers criss-cross style so that they can be read from left-to-right or top-to-bottom. All possible entries with two or more connected digits are given.
