13/12/12:

## Arrow Sudoku by Thomas Snyder Theme: It's Sudoku Time!

# 13/12/13: <br> Digital Snail by Palmer Mebane Theme: WPC Practice 

Rules: Enter digits 1 through 4 into some cells so that each row and column contains each digit exactly once. Also, along the snail (from the upper-left corner and spiraling to the center) digits must occur in 1-2-3-4-1-2-3-4-... order. Some clues are given in the grid in the form of lit digital segments. Each of these cells must contain a digit, and that digit must have that segment lit in the form shown below the puzzle. ANSWER ENTRY: Enter the marked rows from left to right, separating the two rows by a comma. Use an X (capital letter) for each empty square.

## ! 234

# 13/12/14: <br> Fillomino (LITS) by Grant Fikes Theme: Logical 

Rules: Normal Fillomino rules, except that all tetrominoes must be connected to form a valid LITS solution. All 4 clues have been replaced by tetromino letters. ANSWER ENTRY: Enter size of polyomino occupying each cell in the marked columns, from top to bottom, using L, I, T, or S (capital letter) if a tetromino. Separate the columns with a comma.

## 13/12/15 (Sunday Surprise):

Basement Skyscraper Sudoku by Hans van Stippent
Rules: Combination of Skyscrapers and Sudoku, with the additional variation that grey cells are "underground" and cannot be seen (think of them as starting with a negative sign if necessary).
As an example, the 4 in row 2 means that four buildings are visible from column 3 to column 7 in that row, even if a 9 is in one of the first two columns.
