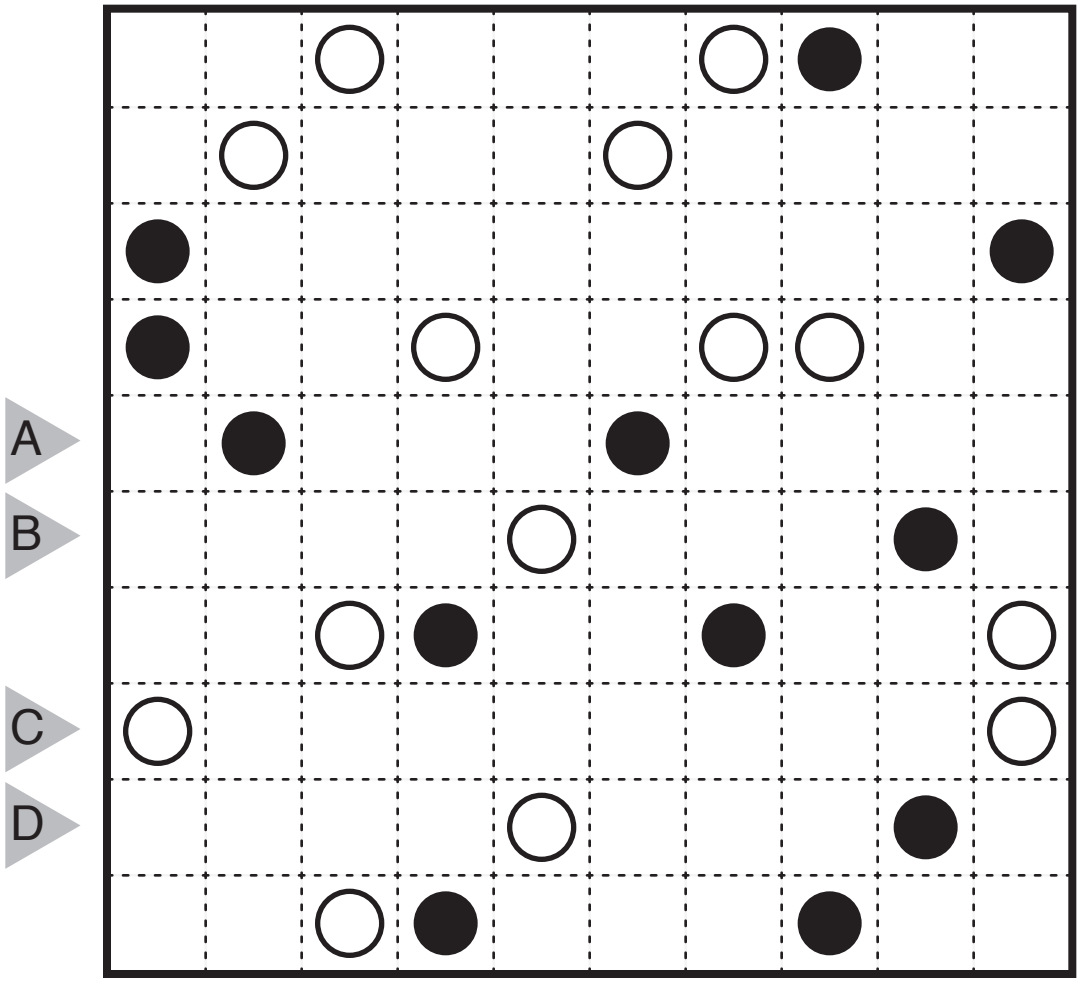
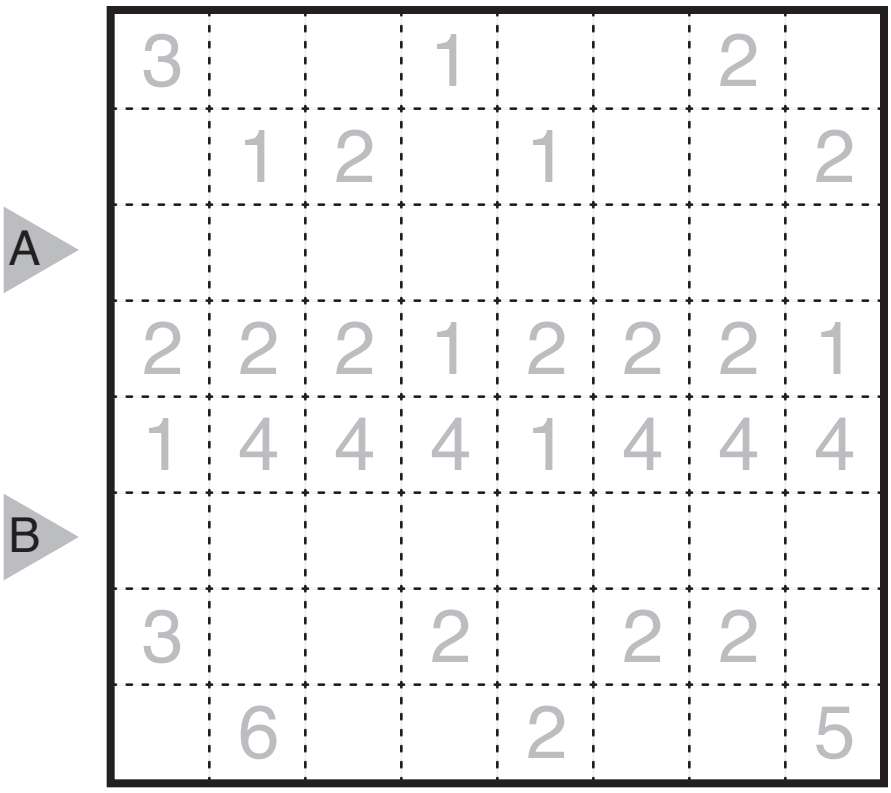
14/07/14:
Masyu (Liar) by Hans van Stippent
Theme: Clue Symmetry and Logic

Rules: Variation of Masyu rules. Exactly one circle clue in every row and column is lying. If a lying clue is a white circle, it should be black instead. If a lying clue is a black circle, if should be white instead.



14/07/15:
Fillomino (Liar) by Serkan Yürekli
Theme: Think Carefully about 24!

Rules: Variation of Fillomino. Every given clue is lying. The correct value is either one more or one less than the given clue.
(1 clues cannot become 0.)



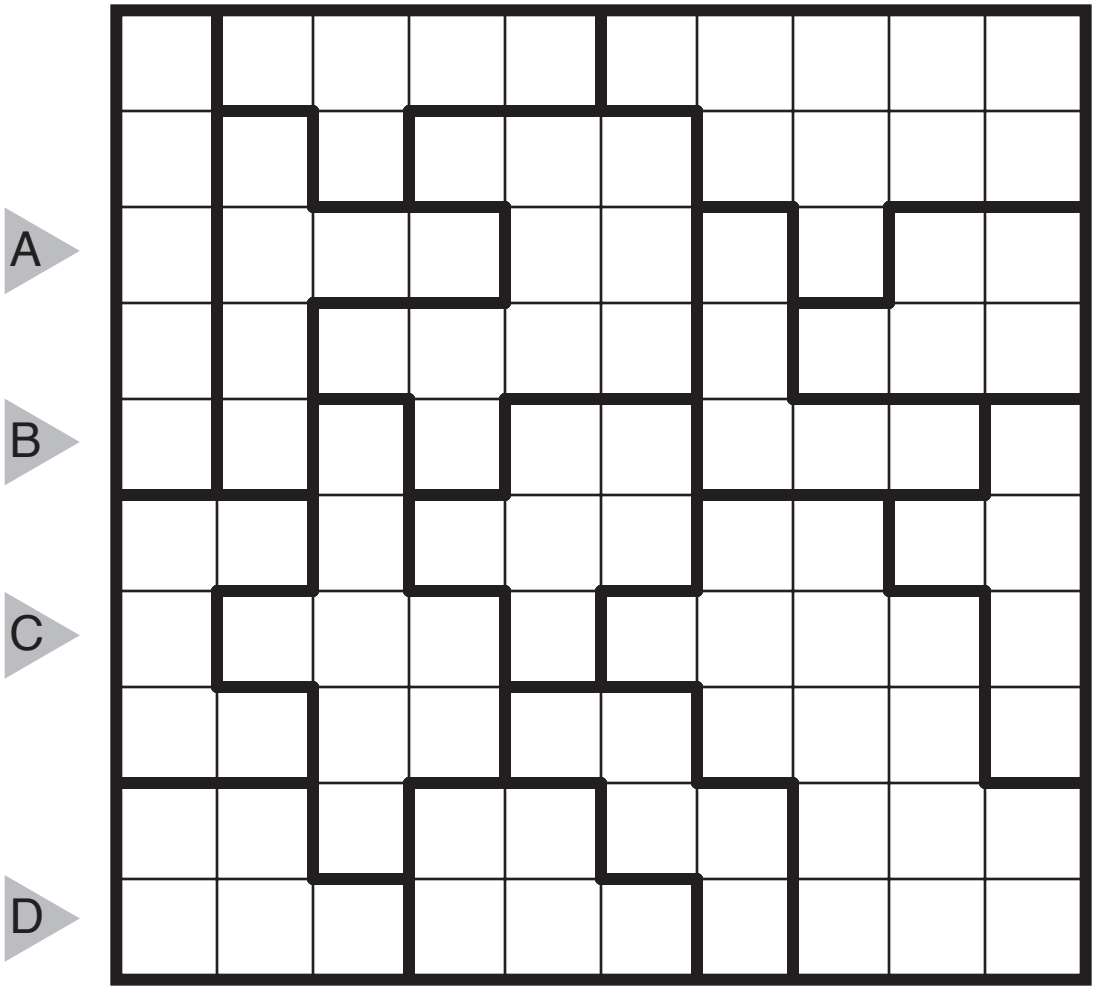
14/07/16:
Sudoku (Liar) by Serkan Yürekli
Theme: Clue Symmetry and Logic

Rules: Variation of Sudoku. Every given clue is lying. The correct value is either one more or one less than the given clue.
(1 clues cannot become 0, and 9 clues cannot become 10.)

	1	8			4			5
						4		
			2	7			8	9
	3	9		6				6
	5			3			7	
2				4		1	4	
8	6			5	9			
		4						
2			8			6	1	

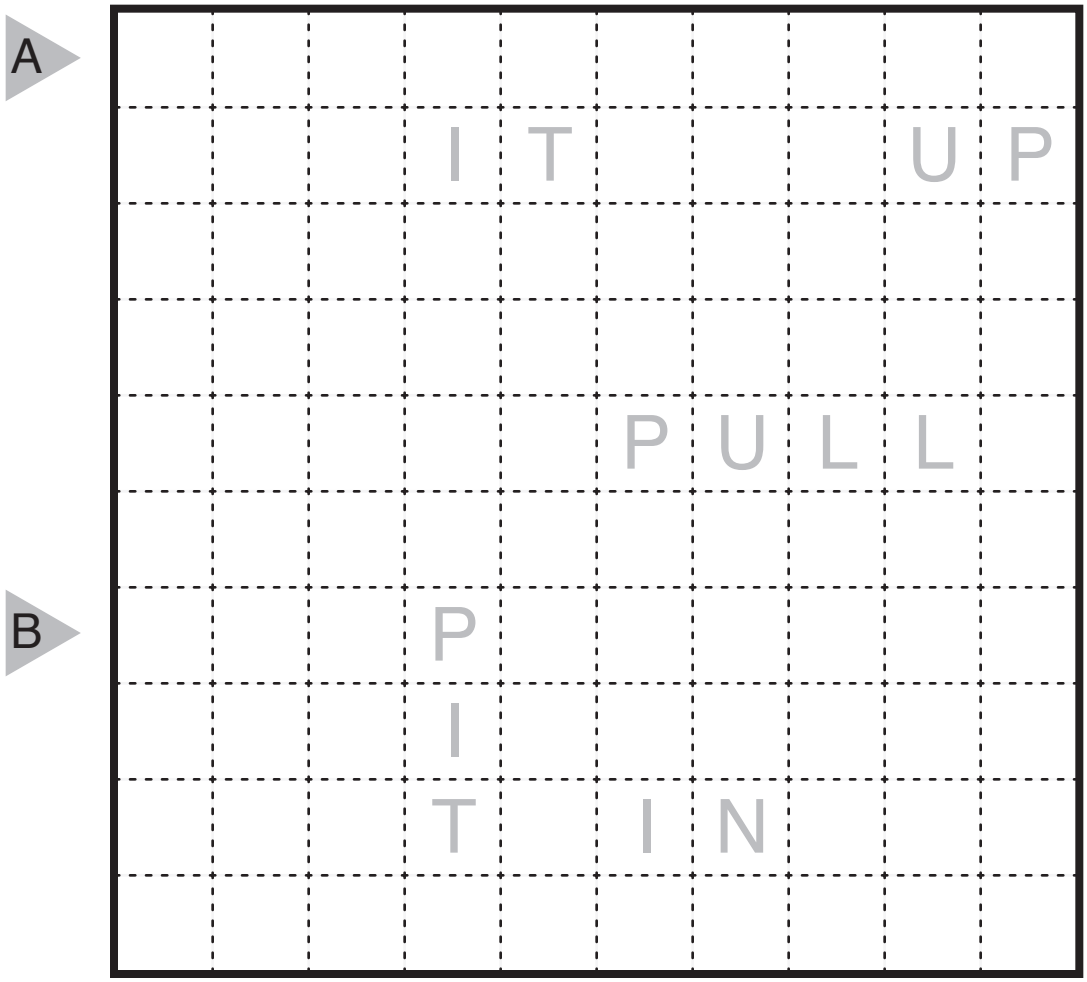
14/07/17:
LITS (Liar) by Prasanna Seshadri
Theme: Logical

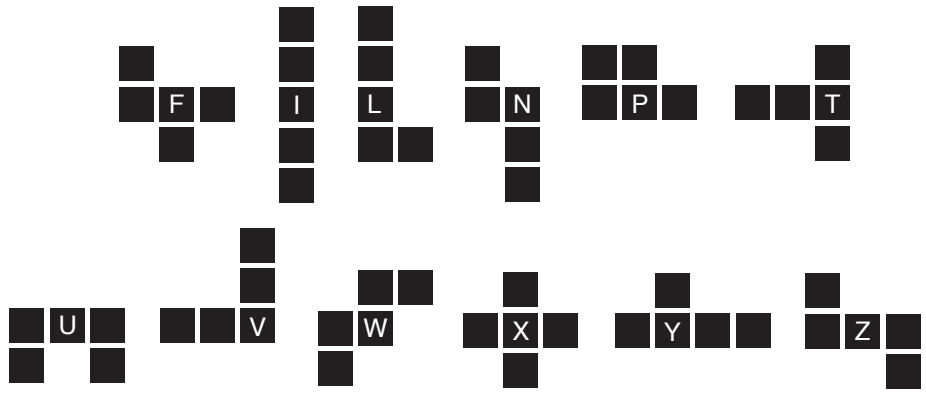
Rules: Variation of LITS. Every region here is a lie: while exactly four cells must be shaded in each bold region, they do not form an L, I, T, or S tetromino. (Note: the other rules still apply. There must be a single connected group of shaded cells, divisible into L, I, T, and S tetrominoes so that no two identical tetrominoes touch and no 2×2 block of cells is completely shaded.)



14/07/18:
Pentominous (Liar) by Serkan Yürekli
Theme: Words

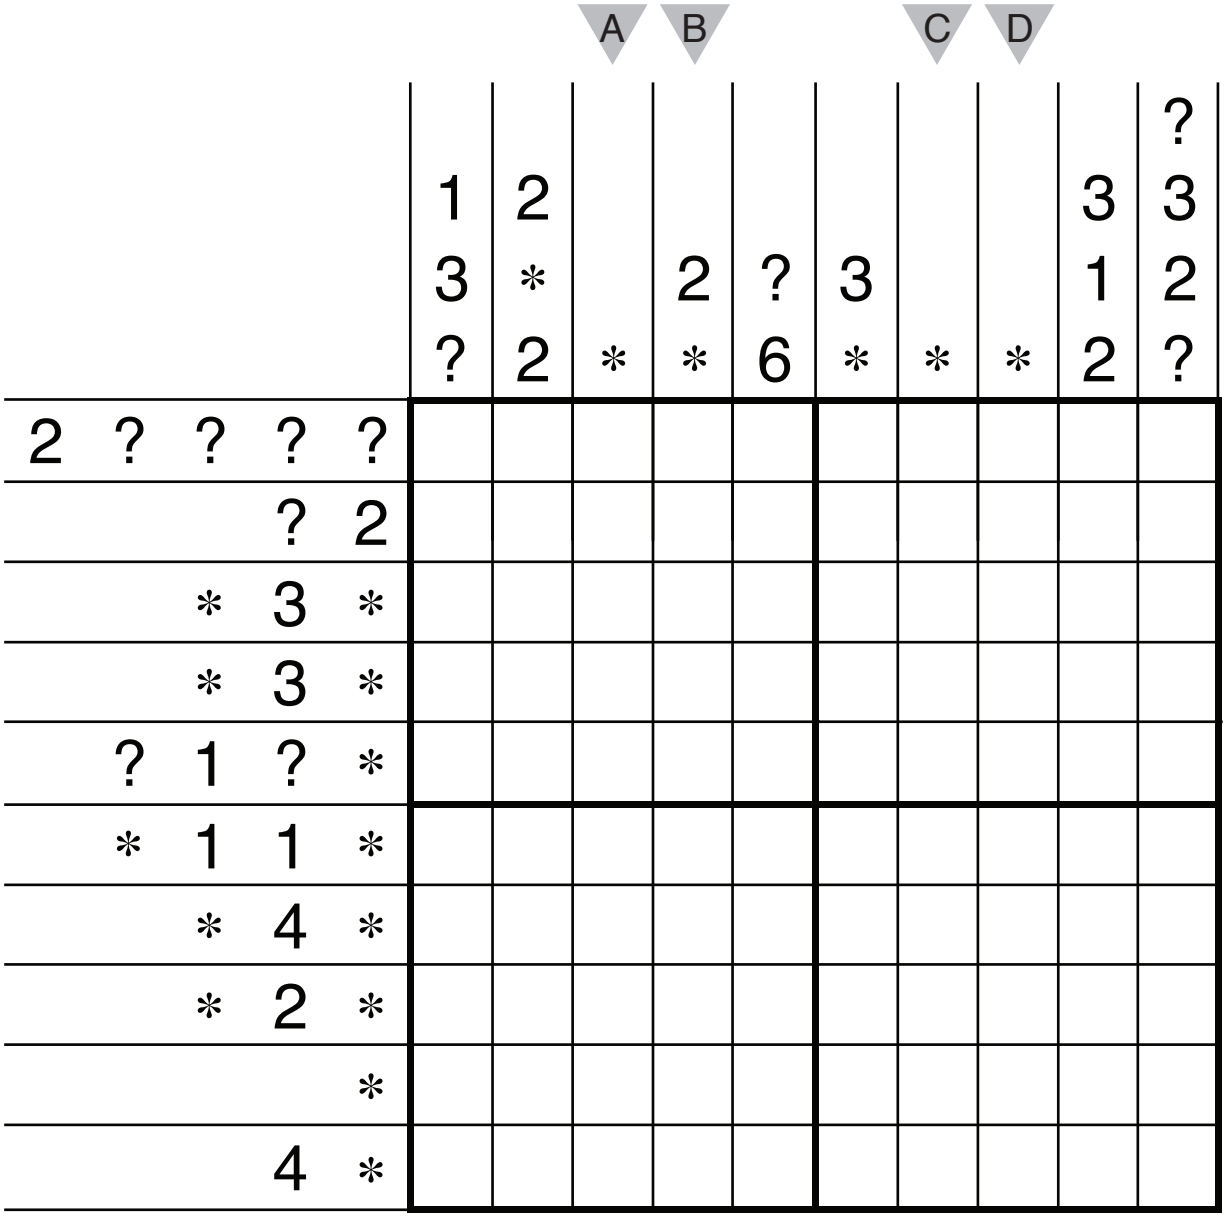
Rules: Variation of Pentominous. Divide this grid into 20 regions each containing 5 cells. Regions with the same shape (including rotations/reflections) cannot share an edge. A region may contain at most one letter clue. Each letter is a liar; the correct letter which indicates the shape of that pentomino is either one higher or one lower in alphabetical order (for instance, a P clue could be an N or a T pentomino).





14/07/19:
Cross the Streams (Arbitrary Lies) by Grant Fikes
Theme: Logical

Rules: Variation of Cross the Streams rules. Some groups of outside clues are lying and refer to the white cells in that row/column, not the black cells. It is up to you to determine which clues are lies. (It is possible for a clue to be true for both the white and black cells in that row/column.)



14/07/20:
Tapa (Total False) by Prasanna Seshadri
Theme: Clue Symmetry and Logic

Rules: Variation of Tapa. Every given clue is lying in two ways: first, the number of given clues in that cell is false; second, the value of any given clues is not true for any part of the Tapa around that cell. For example, a 3 clue could actually indicate 24, but it could not indicate 2 (same number of clues) or 23 (the digit 3 appears). 0 is not a valid clue for this Tapa.

A			4 3 2							3 2 1		
			4 3 2		7 6			7 6		3 2 1		
	2											2
B												
			2 1			1	2			4 3		
			3 2			3	4			5 7 2 4		
C												
	1											1
			2 2		7 6			7 6		6 5		
D			3							7 6 5
