Pentominous (Cipher) by Takeya Saikachi

Rules: Divide the grid into 20 pentominoes so that no two pentominoes of the same shape (including rotations/reflections) share an edge. Each number in this grid represents a clue for a different letter/pentomino as in a regular Pentominous puzzle; all instances of a number must represent the same letter. An inventory of possible pentominoes is given below the puzzle.

★★★☆☆

	5	6	1	7	8	5	
	9					5	
	9		1	2		6	
	9		3	4		6	
	9					6	
	8	8	4	2	2	4
