

# Pentominous (Cipher) by Takeya Saikachi

Rules: Divide the grid into 20 pentominoes so that no two pentominoes of the same shape (including rotations/reflections) share an edge. Each number in this grid represents a clue for a different letter/pentomino as in a regular Pentominous puzzle; all instances of a number must represent the same letter. An inventory of possible pentominoes is given below the puzzle.

1	2	3				3	4	4	
	5	2	6						
							7		
		2					7		
		8					7		
		8							
						9	10	10	
	11	12	12				4	12	12

*Triplets*
