- 1) All shaded cells will be connected through a network of adjacent shaded cells;
- 2) No three shaded cells will share a common vertex;
- 3) When two tetrahexes share an edge in adjacent regions, they must not be the same type (S, L, I, C, or Y), regardless of potential rotations or reflections.

# Kakuro (Hex) by Murat Can Tonta

Rules: Fill all empty hexes with digits from 1-9 so that all number clues (in white) indicate the sum of the digits in that direction. Digits cannot repeat in any entry (i.e., any group of hexes connected either horizontally or in one of the two diagonal directions, without any black cells separating them). This no repeat rule applies even for unclued entries.

# Slitherlink (Hex) by Thomas Snyder
