

## Chaos Construction Sudoku (Cell Count) by clover!

Divide the grid along the grid lines into six non-overlapping, orthogonally-connected six-cell regions. Also, insert a number from 1 to 6 into each cell so that no number repeats in any row, column, or region. A number filling a circle indicates how many of the cells touching the circle (up to nine, including the cell with the circle in it) are in that region.
