A Story of Self-setting Sudoku #1 by Thomas Snyder

The first level of self-setting is "Setter Assistance". The author, who has thought of an interesting idea, comes up with a grid pattern by hand, fills in a starting seed, and then adds the remaining numbers with some software to characterize the remaining solutions and get a unique Sudoku. AI is used for making postscript art, but not the AI within AI which is more than just assistance.

*Intelligence is Thinking * The Box (1 of 5)*
