

159 (Column Indexer) Sudoku by Philip Newman

Rules: Insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region. Also, the cells marked in red are column indexers. In this puzzle, 1, 5, and 9 are the column indexers. If the number X is in a red cell in column Y in a given row, then in the same row the number Y is in column X. (For example, if in the top row there is a 4 in column 1 in the red column indexer, then the 1 in that row is in column 4; similarly, if there is a 5 in column 7 of the top row, that would mean column 5 of the top row contains a 7 because of where the 5 would be indexed.)

	2					1		
		3			2			
			4	3				
5								
								5
				7	6			
			8			7		
		9					8	

A Little from Column 159
