# Nonodoku by Bill Murphy

Rules: Insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region. Also, the clues outside the grid represent strings of numbers that must appear in order in adjacent cells, reading from top to bottom if given above the grid or from left to right if given to the left of the grid. (E.g., in the first row, 4-8-7-2 must appear in a contiguous set of four cells from left to right.)
