Disparity Sudoku by Philip Newman

Rules: Insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region. Across the bold region boundaries, the numbers must be of opposite parity (i.e., even on one side and odd on the other).

For example: if R1C6 is odd, R1C7 must be even. If R1C6 is even, R1C7 must be odd.
