

Renban / Little Killer Sudoku by Mr.Menace

(This puzzle was first created in 2021 and is now being added to GMPuzzles as part of our Cryptic Sudoku Series with a YouTube discussion as well.)

Standard Sudoku rules (insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region). Numbers along each line must form a non-repeating consecutive set, in any order. (For example, a 4-cell Renban line could be 4352, but not 5679 or 2312.) Also, numbers along the indicated diagonals must sum to the given total outside the grid. Numbers can repeat on the diagonals if not violating standard Sudoku rules.
