

Between Lines Clone Sudoku by clover!

Standard Sudoku rules (insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region). Numbers along each line must have values strictly between the values of the two numbers in the circle cells bounding that particular line. (For example, R1C3, R1C2, R1C1, R2C1, and R3C1 must have values between 1 and 7, the values in R1C4 and R4C1.) Additionally, each shaded, connected shape ("clone") in the grid must include the same numbers in the same positions with no rotations or reflections. Numbers may repeat within a clone.
