

Average Arrow Sudoku by clover!

Rules: Standard Sudoku rules (insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region). Some arrow shapes are in the grid; the number in the circled cell is equal to the average of all numbers along the arrow. (For example, as R2C4 = 3, the average of R1C2, R1C3, and R1C4 is 3.)
