

159 (Column Indexer) Arrow Sudoku

by Philip Newman

Rules: Insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region. Some arrow shapes are in the grid; the sum of the numbers along the path of each arrow must equal the number in the circled cell. Also, the cells marked in red are column indexers. In this puzzle, 1, 5, and 9 are the column indexers. If the number X is in a red cell in column Y in a given row, then in the same row the number Y is in column X. (For example, if in the second row there is a 2 in column 1 in the red column indexer, then the 1 in that row is in column 2; similarly, if there is a 5 in column 7 of the bottom row, that would mean column 5 of the bottom row contains a 7 because of where the 5 would be indexed.)
