

# Tens Digit Product Sudoku by clover!

Standard Sudoku rules (insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region). The number clues given between pairs of cells indicate the tens digit of the product of the numbers in those two adjacent cells. (For instance, two adjacent cells containing 8 and 9 would have a clue of 7, since  $8 \times 9 = 72$ .)

*Rounding Error*
