# Difference / Ratio Pairs Sudoku by
Philip Newman

Standard Sudoku rules (insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region). If a black circle is given between two adjacent cells, then the two numbers must have a ratio of the given number. If a white circle is given between two adjacent cells, then the two numbers must have a difference of the given number. Pairs of cells without circles can have any relationship.
