

Ratio Pairs Sudoku by clover!

Standard Sudoku rules (insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region). If a black circle is given between two adjacent cells, then the two numbers must have a ratio of the given number. Pairs of cells without circles can have any relationship. (For instance, a black circle reading "3" indicates that the two numbers have a ratio of 1:3, such as 1 and 3 or 2 and 6.)
