

Squishdoku by Bill Murphy

Insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or 3x3 region. In this variation, the 3x3 regions overlap along the cells with dotted lines (i.e., the first region at the top goes from column 1 to 3, the second from column 3 to 5, and the last from column 5 to 7 with overlapping in columns 3 and 5; the same overlapping applies to the rows.)
