

159 (Column Indexer) Sudoku by clover!

Standard Sudoku rules (insert a number from 1 to 9 into each cell so that no number repeats in any row, column, or bold region). Also, the cells marked in red are column indexers. In this puzzle, 1, 5, and 9 are the column indexers. If the number X is in a red cell in column Y in a given row, then in the same row the number Y is in column X. (For example, if in the third row there is a 3 in column 1 in the red column indexer, then the 1 in that row is in column 3; similarly, if there is a 5 in column 4 of the third row, that would mean column 5 of the third row contains a 4 because of where the 5 would be indexed.)
